

**Received an order for equipment for the Kashiwazaki Clean Hydrogen/Ammonia Project in Japan**

Shin Nippon Machinery Co., Ltd. has received an order from domestic EPC operating company JGC Japan Corporation for 3 centrifugal pumps for ground facilities in INPEX Corporation's demonstration "Kashiwazaki Clean Hydrogen/Ammonia Project"

This project is Japan's first demonstration plant to consistently verify the production of blue hydrogen and ammonia using domestically produced natural gas, the implementation of CCS/CCUS in domestic depleted gas fields, and power generation using the produced clean energy. This project requires the same high quality and reliability as the pumps we have delivered to oil, petrochemical and gas plants around the world.

We have delivered large number of steam turbines (delivery record: 85 countries / 7,550 units) and process pumps (delivery record: 62 countries / 27,100 units) all over the world.

Shin Nippon Machinery Co., Ltd. will continue to contribute to the realization of a low-carbon society by leveraging its high technological capabilities and reliability based on its extensive delivery record.
